Introduction

1.1) Abstract/Purpose :

One of the most important reasons for keeping a to-do list is the organization. Organizing your tasks with a list can make everything much more manageable and make you feel grounded. Seeing a clear outline of your completed and uncompleted tasks will help you feel organized and stay mentally focused.

As you cross items off your to-do list, you'll feel a sense of progress and accomplishment that can be missed when rushing from one activity to the next. The affirmation that you are making progress will help motivate you to keep moving forward rather than feeling overwhelmed.

1.2) Objective:

Scope of this project is that -

- Your brain is not the most efficient memory tool and will only trust systems that it knows works. Good memory recall is as simple as finding those things that will jog your brain at the time it needs to remember. Having a written list helps us remember when things have do be done so we do not miss anything.
- Making a to-do list is an important first step but prioritizing that list ensures that you focus on the most important items rather than giving in to the temptation of working on less important items because they may stand out more or because they are easier to do. Once you have a list of the things you need to complete, set priorities and decide which jobs should be done first.
- Using a to-do list enables you to mark off the tasks you have completed. At the end of the day, when you look at the list, it will give you a sense of accomplishment and satisfaction. It might also have the effect of waking you up if nothing has been marked completed.
- Regular tasks can occur on a monthly cycle: e.g., paying bills. You can create date-based lists that will remind you to complete task which are regular, but not frequent. A calendar is the easiest place to track such a list.

- This Project mainly will help the people   to keep their thoughts and story in one palce.

Chapter-2

Overall Description

2.1) Features :

The primary features of this we app is-
- **Add Note :** You can write note everyday and keep it save

- **Edit Note :** You can edit your note anytime
- **Delete Note :** You can delete your note

Chapter-3

Development Environment & used Technology

3.1-Used IDE Atom & Vscode :

3.2-ES6+ javascript :

3.3-React for Front-end :

3.4-Used Git for Development :
